

GRAND LIGHTING™

GL80FL Fanless LED Gobo Projector

Note this seal, tighten the lenstube firmly against this silicone seal.

Check your gobo has already been fitted in here.

You will need two 17mm spanners to fit and tighten the nuts that you will find in the container.

There is a second silicone seal here. Once you have focused the light please tighten this locking ring onto the silicone seal.

This is the lens you rotate to focus, then tighten locking ring.
